Risk						
		Trisomy 21	<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b>            After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.            The free beta HCG level is low.            The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.            Please note that risk calculations are statistical approaches and have no diagnostic value!</p>
