| The MoMs have been corrected according to:<br>maternal weight<br>ethnic origin |              |            |  |

| Risks at term              |        |
|----------------------------|--------|
| Biochemical risk for Tr.21 | 1:3622 |
| Age risk:                  | 1:1489 |
| Neural tube defects risk   | 1:4635 |

|                                                                                                                                                                                               |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| TRISOMY 21 SCREENING                                                                                                                                                                          |  |
| <b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b>                                                                                                   |  |
| After the result of the Trisomy 21 test it is expected that among 3622 women with the same data, there is one woman with a trisomy 21 pregnancy and 3621 women with not affected pregnancies. |  |
| The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.                                                                                 |  |
| Please note that risk calculations are statistical approaches and have no diagnostic value!                                                                                                   |  |

|                                                                                        |  |
|----------------------------------------------------------------------------------------|--|
| TRISOMY 18 SCREENING                                                                   |  |
| <b>The calculated risk for trisomy 18 is &lt; 1:10000, which indicates a low risk.</b> |  |

|                                                                                              |  |
|----------------------------------------------------------------------------------------------|--|
| NEURAL TUBE DEFECTS (NTD) SCREENING                                                          |  |
| <b>The corrected MoM AFP (1.41) is located in the low risk area for neural tube defects.</b> |  |
