| Down's Syndrome Risk  |  |
|---|--|
| <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b><br/> After the result of the Trisomy 21 test it is expected that among 8458 women with the same data, there is one woman with a trisomy 21 pregnancy and 8457 women with not affected pregnancies.<br/> The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.<br/> Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |  |

| Neural tube defects risk  | Risk for trisomy 18  |
|---|--|
| The corrected MoM AFP (1.00) is located in the low risk area for neural tube defects. | The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk. |
