| Down's Syndrome Risk |
|--|
| <p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The HCG level is low.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |

| Neural tube defects risk | Risk for trisomy 18 |
|---|---|
| <p>The corrected MoM AFP (0.98) is located in the low risk area for neural tube defects.</p> | <p>The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.</p> |
