

Patient data					
Name	MRS. BABITA	Patient ID	2105246657/DHJ		
Birthday	08-07-1993	Sample ID	2105246657/DHJ		
Age at sample date	27.9	Sample Date	31-05-2021		
Gestational age	12 + 5				
Correction factors					
Fetuses	1	IVF	no		
Weight	50	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data		Ultrasound data			
Parameter	Value	Corr. MoM			
PAPP-A	6.31 mIU/ml	1.18	Gestational age 12 + 3		
fb-hCG	94.8 ng/ml	2.03	Method CRL Robinson		
Risks at sampling date		Scan date 29-05-2021			
Age risk	1:808	Crown rump length in mm 62.6			
Biochemical T21 risk	1:1295	Nuchal translucency MoM 0.81			
Combined trisomy 21 risk	1:6787	Nasal bone present			
Trisomy 13/18 + NT	<1:10000	Sonographer DR. AADIL HUSSAIN MALIK			
		Qualifications in measuring NT MD			
Trisomy 21					
<p>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 6787 women with the same data, there is one woman with a trisomy 21 pregnancy and 6786 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>					
<p>The graph illustrates the calculated risk for Trisomy 21 across different ages. The x-axis represents age from 13 to 49, and the y-axis represents risk. The curve starts at a risk of 1:10000 at age 13, rises to a peak of 1:100 at age 29, and then falls. A vertical line at age 29 marks the 'Cut off' risk level. The area under the curve is shaded: green for values below the cut-off, yellow for values between the cut-off and the calculated risk, and red for values above the calculated risk.</p>					
Trisomy 13/18 + NT					
<p>The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.</p>
