

Patient data			
Name	MRS. SHAILI SERWAL	Patient ID	
Birthday	12-10-1995	Sample ID	2106247379/DHJ
Age at sample date	25.7	Sample Date	12-06-2021
Gestational age	13 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	46	diabetes	no
Smoker	no	Origin	Asian
Biochemical data			
Parameter	Value	Corr. MoM	Ultrasound data
PAPP-A	10.1 mIU/ml	1.29	Gestational age 12 + 5
fb-hCG	97.8 ng/ml	2.20	Method CRL Robinson
Risks at sampling date			
Age risk	1:960		Scan date 07-06-2021
Biochemical T21 risk	1:1503		Crown rump length in mm 66.2
Combined trisomy 21 risk	1:7664		Nuchal translucency MoM 0.83
Trisomy 13/18 + NT	<1:10000		Nasal bone present
			Sonographer DR. ARTEE MITTAL
			Qualifications in measuring NT M.D
Trisomy 21			
<p>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 7664 women with the same data, there is one woman with a trisomy 21 pregnancy and 7663 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>			
<p>The graph illustrates the calculated risk for Trisomy 21 across different ages. The x-axis represents age from 13 to 49, and the y-axis represents risk. The curve starts at a risk of 1:10000 at age 13, rises sharply to a peak of 1:100 at age 25, and then gradually declines. A vertical line at age 25 marks the 'Cut off' risk level. The area under the curve is shaded: green for risk < 1:1000 (below cut-off), yellow for 1:1000 to 1:100 (between cut-off and age risk), and red for risk > 1:100 (above age risk).</p>			
Trisomy 13/18 + NT			
<p>The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.</p>
