

Prisca 5.2.0.13
Date of report: 21/11/21

Patient data			
Name	LIPIKA GHOSH	Patient ID	
Birthday	23/06/92	Sample ID	10050830
Age at sample date	29.4	Sample Date	18/11/21
Gestational age	11 + 3		
Correction factors			
Fetuses	1	IVF	unknown
Weight	55	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.41 mIU/mL	0.74	
fb-hCG	17.68 ng/mL	0.37	
Risks at sampling date			Trisomy 21
Age risk	1:664		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The free beta HCG level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Biochemical T21 risk	<1:10000		
Combined trisomy 21 risk	<1:10000		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
