

Prisca 5.2.0.13
Date of report: 25/11/21

Patient data			
Name	RESHMA BIBI	Patient ID	
Birthday	25/11/86	Sample ID	10055555
Age at sample date	35.0	Sample Date	23/11/21
Gestational age	13 + 0		
Correction factors			
Fetuses	1	IVF	unknown
Weight	64	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21	unknown		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.93 mIU/mL	0.77	
fb-hCG	85.23 ng/mL	2.76	
Risks at sampling date		Gestational age	
Age risk	1:277	12 + 6	
Biochemical T21 risk	1:79	Method CRL Robinson	
Combined trisomy 21 risk	1:476	Scan date 22/11/21	
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm 68	
		Nuchal translucency MoM 0.81	
		Nasal bone unknown	
		Sonographer DR.S.MANDAL.	
		Qualifications in measuring NT MD.	
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 476 women with the same data, there is one woman with a trisomy 21 pregnancy and 475 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
