

Prisca 5.2.0.13
Date of report: 24/11/21

Patient data			
Name	PRIYA BISWAS	Patient ID	
Birthday	27/08/86	Sample ID	10055811
Age at sample date	35.2	Sample Date	23/11/21
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	unknown
Weight	66	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21			unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	5.32 mIU/mL	1.41	Gestational age 11 + 6
fb-hCG	159.8 ng/mL	4.30	Method CRL Robinson
Risks at sampling date			Scan date 20/11/21
Age risk		1:255	Crown rump length in mm 54.7
Biochemical T21 risk		1:93	Nuchal translucency MoM 1.45
Combined trisomy 21 risk		1:69	Nasal bone unknown
Trisomy 13/18 + NT		<1:10000	Sonographer DR.ANINDYA BHATTACHARYYA
			Qualifications in measuring NT MD.
Trisomy 21			
<p>The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 69 women with the same data, there is one woman with a trisomy 21 pregnancy and 68 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>			
Trisomy 13/18 + NT			
<p>The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.</p>
