

Prisca 5.2.0.13
Date of report: 06/01/22

Patient data			
Name		BARNALI DUTTA	
Birthday		07/02/98	
Age at sample date		23.9	
Gestational age		11 + 6	
Patient ID		10091117	
Sample ID		03/01/22	
Sample Date			
Correction factors			
Fetuses	1	IVF	unknown
Weight	66	diabetes	unknown
Smoker	unknown	Origin	Asian
Previous trisomy 21	unknown		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	2.66 mIU/mL	0.84	11 + 6
fb-hCG	40.06 ng/mL	0.97	Method
			CRL Robinson
			Scan date
			03/01/22
Risks at sampling date			Crown rump length in mm
			54
Age risk			Nuchal translucency MoM
1:979			1.05
Biochemical T21 risk			Nasal bone
1:4427			unknown
Combined trisomy 21 risk			Sonographer
<1:10000			DR.A.K. PAUL.
Trisomy 13/18 + NT			Qualifications in measuring NT
<1:10000			MBBS.
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
