| Down's Syndrome Risk   |
|--|
| <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The HCG level is low.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |

| Neural tube defects risk  | Risk for trisomy 18   |
|---|---|
| The corrected MoM AFP (1.97) is located in the low risk area for neural tube defects. | The calculated risk for Trisomy 18 is 1:1074, which indicates a low risk. |
