Down's Syndrome Risk
<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 4141 women with the same data, there is one woman with a trisomy 21 pregnancy and 4140 women with not affected pregnancies.</p> <p>The HCG level is high.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p>

Neural tube defects risk	Risk for trisomy 18
<p>The corrected MoM AFP (1.29) is located in the low risk area for neural tube defects.</p>	<p>The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.</p>
